

163,146  
cases

Most of them, sharing the same values with different rows by more than 100 variables, including the same HASH key and date of admission.

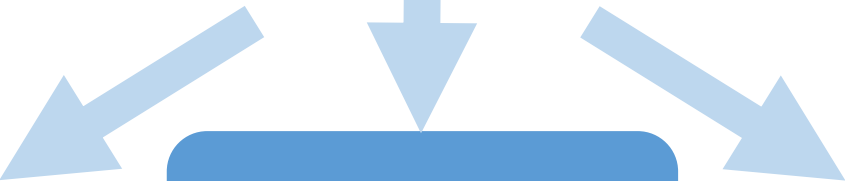

125,650  
cases

Still, cases are sharing some characteristics relevant for the study, including HASH key and date of admission (such as Type of center, Type of program, SENDA program, Main substance, Substance of initiation, Year of initiation).

118,088  
cases

May share same date of admission and HASH, or different values that may still be informative (eg. Same values in most of the variables, but different center ID or type of plan).

899 cases w/ same  
HASH and date of  
admission

1062 overlaps between  
dates of admission &  
discharge

543 probabilistic  
matches
